

Q1. Accept a number from user - if it is divisible by 3 print “fun” , if it is divisible by 7 print “buzz” and if it is divisible by both(3,7) print “fun -buzz” . [ Two answer]

```
package Test_19_01_26;
```

```
import java.util.Scanner;
```

```
public class Q1 {
```

```
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Enter a number : ");
```

```
        int n = sc.nextInt();
```

```
        // Answer 1
```

```
        if(n % 3 == 0 && n % 7 == 0)
```

```
            System.out.print("fun buzz");
```

```
        else if(n % 3 == 0)
```

```
            System.out.print("fun");
```

```
        else if(n % 7 == 0)
```

```
            System.out.print("buzz");
```

```
        // Answer 2
```

```

//          if(n % 3 == 0)
//              System.out.print("fun ");
//
//          if(n % 7 == 0)
//              System.out.print("buzz ");
//
//      }
//
//  }

```

Q2. Accept a start number from user and end number from user. Print all odd number between start and end number. [ Two Answer]

```
package Test_19_01_26;
```

```
import java.util.Scanner;
```

```
public class Q2 {
```

```
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Enter Start number : ");
```

```
        int start = sc.nextInt();
```

```
        System.out.print("Enter End number : ");
```

```
int end = sc.nextInt();
```

```
// Answer 1
```

```
for(int i=start; i<=end; i++)  
{  
    if(i % 2 != 0)  
        System.out.println(i);  
}
```

```
// Answer 2
```

```
//    if(start % 2 == 0)  
//        start++;  
//  
//    for(int i=start; i<=end; i+=2)  
//    {  
//        System.out.println(i);  
//    }  
}  
  
}
```

Q3. Accept a number from user and check if it is palindrome number or not eg (121)

```
package Test_19_01_26;
```

```
import java.util.Scanner;
```

```
public class Q3 {
```

```
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Enter a number : ");
```

```
        int n = sc.nextInt();
```

```
        int d, rev = 0;
```

```
        int x = n;
```

```
        while(x != 0)
```

```
        {
```

```
            d = x % 10;
```

```
            rev = rev * 10 + d;
```

```
            x = x / 10;
```

```
        }
```

```
        if(rev == n)
```

```
            System.out.println("Palindrome");
```

```
        else
```

```
            System.out.println("Not a Palindrome");
```

```
    }
```

```
}
```

Q4. Accept a term from user and print Fibonacci series.

```
package Test_19_01_26;
```

```
import java.util.Scanner;
```

```
public class Q4 {
```

```
    public static void fibo(int n) {
```

```
        int a = 0, b = 1, c;
```

```
        System.out.print(a + " " + b);
```

```
        for(int i=0; i<n-2; i++)
```

```
        {
```

```
            c = a + b;
```

```
            System.out.print(" " + c);
```

```
            a = b;
```

```
            b = c;
```

```
        }
```

```
    }
```

```
public static void main(String[] args) {  
    Scanner sc = new Scanner(System.in);  
  
    System.out.print("Please enter no. of terms : ");  
    int n = sc.nextInt();  
  
    if(n <= 0)  
        System.out.println("Enter valid input");  
    else if(n == 1)  
        System.out.println(0);  
    else  
        fibo(n);  
}  
  
}
```
